[Portfolio](#)  | [Git-Repo](#)  | [Hackerank](#) 

Summary

AI-native Full Stack Developer, Prompt Engineer, and LLM Evaluator with experience building intelligent applications using AI-assisted development workflows, rapid prototyping, and prompt-driven engineering. Skilled in leveraging Generative AI tools such as ChatGPT, Gemini, Codex, and Ollama to accelerate software development, optimize workflows, and deliver scalable end-to-end solutions. Experienced in full-stack development, NLP systems, LLM evaluation, and AI-powered SaaS architecture using React, FastAPI, Python, and modern cloud deployment platforms. Completed **MCA-Data Science** from Jain University, with a strong focus on applying AI-driven and data-centric approaches to solve real-world business problems.

Technical-SKILLS

AI-Assisted Development & Vibe Coding

Generative AI Tools: ChatGPT, Gemini, Codex, Ollama, Grok.

- AI-assisted software development
- Rapid prototyping with Generative AI
- Prompt-driven engineering workflows
- AI pair-programming
- LLM-assisted debugging and optimization
- Context engineering
- AI workflow orchestration
- MCP/Agentic workflow understanding

Data Science & Machine Learning

- **Machine Learning:** Classification, Regression, K-Means Clustering
- **Statistical Methods:** Predictive Analysis, Text Analytics, Data Mining, Random Forest, Time Series Analysis
- **Libraries:** NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, Requests
- **Data Reporting Tools:** MS-Excel, Tableau, Power BI
- **Web Scraping:** BeautifulSoup

Full Stack Development

- **Frontend:** HTML5, CSS3, React, Vite, Angular, Bootstrap, Tailwind CSS
- **Backend & Programming:** Python, C#, .NET, REST APIs, FastAPI
- **Database:** SQL, MS-SQL

Tools & Platforms

- **Developer Tools:** Visual Studio, Visual Studio Code, Jupyter Notebook, MS-SQL Management Studio
- **Version Control:** GitHub
- **Data Management:** JIRA, ASANA

Non-Technical-SKILLS.

Instructional Design & Learning Development:

- Instructional Design
- Learning Experience Design (LXD)
- Course Development
- Curriculum Design
- Storyboarding
- Content Structuring
- Adult Learning Principles
- Learning Objectives Mapping
- Training Material Development
- Template Standardization
- Client Requirement Analysis

Quality Assurance & Operations:

- Quality Assurance (QA)
- Quality Review & Auditing
- Content Validation
- Process Improvement
- Documentation Standards
- Error Identification & Resolution
- Compliance Verification
- Delivery Management
- Review Workflows
- Continuous Improvement

Team Leadership & Stakeholder Management:

- Team Leadership
- Team Mentoring & Coaching
- Knowledge Transfer
- Client Communication
- Stakeholder Management
- Cross-functional Collaboration
- Project Coordination
- Task Prioritization
- Time Management
- Performance Feedback

-
- Conflict Resolution

Professional Skills:

- Analytical Thinking
- Attention to Detail
- Problem Solving
- Critical Thinking
- Decision Making
- Adaptability
- Organizational Skills
- Communication Skills
- Presentation Skills
- Documentation
- Process Management

EDUCATION

Jain University, Bengaluru – *Masters of computer applications in Data Science*

Aurora College, Hyderabad - *B. Com Computers*

Certificates

 [Exploratory Data Analysis for Machine learning](#) – **IBM**.

 [Google Data Analytics](#) – **GOOGLE**.

EXPERIENCE

Domain Expert- Science and Technology

Turing | August 2026 – Present

- Serve as a subject-matter expert evaluating large language model performance on technical Science & Technology queries, constructing rigorous test cases spanning engineering, patents, regulatory science, and emerging technology to surface gaps in model reasoning.
- Author precision-engineered technical prompts that require synthesizing information across primary scientific and regulatory sources (patent filings, standards bodies, technical archives) rather than surface-level knowledge, ensuring each case reflects genuine domain complexity rather than trivia.
- Benchmark model outputs against ground-truth research, identifying instances of factual drift, unsupported claims, and reasoning shortcuts, and documenting failure patterns to inform model improvement cycles.
- Produce annotated evaluation reports pairing each verified answer with a transparent, source-cited research trail, enabling engineering and research teams to audit correctness and reproduce findings independently.

-
- Contribute domain-specific calibration to Turing's evaluation frameworks, helping define what constitutes genuine technical difficulty versus ambiguity, and ensuring test cases meaningfully differentiate model capability at the frontier of Science & Technology reasoning.

AI Red-Teamer / Adversarial Prompt Engineer (LLM Evaluation)

HandShakeAI | August 2026 – Present

- Designed adversarial, multi-hop research prompts across domains (Health & Medicine, Music, Shopping, Science & Technology, Video Games) engineered to expose factual failure points in large language models like ChatGPT, chaining 3+ obscure primary sources per prompt to eliminate single-search shortcuts.
- Conducted deep-web verification using government databases, patent records (USPTO/Google Patents), regulatory filings (FDA, CPSC, BIS), and official institutional archives to construct fact chains that were fully traceable, source-verified, and resistant to hallucination.
- Authored detailed Golden Trajectories documenting the exact step-by-step research path — search queries, source URLs, and verification logic — required to independently reach and confirm the correct answer, ensuring full reproducibility for downstream reviewers.
- Applied a structured 8-point quality framework (specificity, timelessness, verifiability, absence of shortcuts/false premises) to every prompt, iteratively testing against live model outputs to confirm genuine reasoning failures rather than ambiguous or flawed questions.
- Collaborated within a reviewer-tasker pipeline, incorporating structured feedback (Praise / Issue / Fix format) to refine prompt difficulty, source quality, and answer defensibility across review cycles.

Instructional Designer & Quality Assurance Manager (Contract)

Brinx | Contract | May 2026 – Present

- Designed and developed learner-centric training courses by transforming complex technical and business concepts into engaging instructional content using standardized instructional design methodologies and templates.
- Led Quality Assurance (QA) activities by reviewing instructional content, ensuring quality, consistency, compliance with standards, and providing feedback to improve deliverables before client submission.
- Mentored and guided Instructional Designers on design standards, template usage, documentation practices, and quality expectations while coordinating timely project delivery across multiple assignments.

-
- Managed end-to-end client communication by gathering requirements, implementing feedback, delivering final course content, and leveraging technical IT expertise to simplify complex topics and enhance learning experiences.

LLM Evaluator & LLM Trainer (Freelance)

Deccan AI Experts | Nov 2025 – Present

- Designed and optimized high-quality prompts for diverse use cases, aligning outputs with project-specific guidelines and objectives.
- Evaluated LLM responses for the *Action Extension* project using structured rubrics to ensure accuracy, relevance, and consistency.
- Analyzed and refined model outputs to reduce hallucinations and improve response quality, contributing to iterative model enhancement.
- Adapted prompt engineering and evaluation strategies across multiple projects to maximize model performance and reliability.

Prompt Engineer & AI Trainer (Freelance)

Outlier | Sep 2024 – Oct 2025

- Developed and fine-tuned prompts tailored to project requirements, improving task-specific LLM performance.
- Conducted systematic evaluation of LLM outputs, refining responses to meet quality standards and training objectives.
- Contributed to model improvement by providing structured feedback and adapting prompt strategies across varied domains.

Data Analyst & Full Stack Developer

Fusion Fort Solutions | Jan 2020 – Aug 2024

- Built and maintained full-stack applications using modern frontend and backend technologies, ensuring scalable and efficient systems.
- Developed REST APIs and integrated frontend-backend workflows to support dynamic business applications.
- Performed data analysis, reporting, and visualization using tools like Tableau and Power BI to generate actionable insights.
- Expanded role from full-stack development to data analytics, driving data-informed decision-making and sparking transition into Data Science (MCA).

CareerLensAI – My Own Product

- Leveraged AI-assisted development workflows using ChatGPT, Gemini, and Codex to accelerate feature development, debugging, architecture refinement, and UI generation.
- Applied prompt-driven engineering techniques to rapidly prototype and iterate production-ready SaaS features.

-
- Utilized AI pair-programming methodologies to optimize development speed, reduce implementation time, and improve developer productivity.
 - Combined traditional software engineering with AI-native development practices to build scalable intelligent recruitment workflows.

PROJECTS RELATED TO LLM Evaluation & Prompt Engineering | Deccan AI

- Designed and implemented evaluation frameworks across multiple projects (Action Extension, Maitrix, Bluebird, OTS) to assess LLM performance on accuracy, relevance, consistency, and hallucination rates.
- Engineered and optimized prompts for diverse use cases, improving response quality, contextual understanding, and task-specific performance.
- Conducted systematic testing and comparative analysis of model outputs, identifying limitations and refining prompts to enhance reliability.
- Contributed to scalable prompt design and evaluation workflows, strengthening AI-driven applications and user interaction quality.

PROJECTS RELATED TO DATA SCIENCE | Fusion Forte Solutions

1. Loan Default Prediction | Machine Learning

- Developed a machine learning model to predict loan default risk, enabling data-driven credit decision-making
- Applied data pre-processing, feature engineering, and model training to identify high-risk borrowers.
- Improved risk assessment accuracy, helping financial institutions minimize losses and optimize lending strategies.

2. Customer Churn Analysis

- Performed end-to-end data analysis including EDA, data cleaning (missing values, outliers), and feature engineering using one-hot encoding.
- Built and optimized ML models (Random Forest, Logistic Regression, XGBoost), achieving best performance with XGBoost.
- Evaluated models using industry-standard metrics and derived actionable insights to support data-driven decision-making and churn reduction.

3. Social Media Tourism | Machine Learning

- Designed device-specific predictive models to optimize digital advertising, segmenting users into Laptop and Mobile categories.

-
- Performed data pre-processing, feature engineering, and model tuning; applied Random Forest (Laptop) and Gradient Boosting (Mobile) for improved targeting accuracy.
 - Evaluated models using precision, recall, F1-score, and ROC-AUC, enabling efficient resource allocation and personalized marketing strategies.

4. Customer Segmentation & Targeted Advertising | Data Science

- Applied K-Means clustering and PCA on customer data to segment users and enable targeted marketing campaigns.
- Performed data pre-processing and dimensionality reduction to improve model efficiency and interpretability.
- Generated actionable insights that enhanced customer engagement, optimized ad targeting, and supported revenue growth.

5. Sales Forecasting & Demand Prediction | Time Series ML

- Built time-series forecasting models using Facebook Prophet to predict daily sales across 1,115 stores, incorporating seasonality, holidays, and promotions.
- Performed data pre-processing and feature engineering to ensure high-quality inputs and improve model accuracy.
- Evaluated models using MAE, RMSE, and MAPE, delivering actionable insights for inventory optimization and demand planning.

PROJECTS Related to AI & Generative AI

1. My-Portfolio | AI-Assisted Development.

- Designed and developed a responsive portfolio using React and Tailwind CSS, achieving **<2s load time** and seamless cross-device performance.
- Leveraged AI tools to accelerate development by **~40%**, improving UI/UX design and content generation efficiency.
- Deployed on Netlify, ensuring **99.9% uptime** and optimized performance, resulting in improved user engagement and accessibility.

2. Rock-Paper-Scissors Game | AI-Assisted Development.

- Built an interactive game using AI-assisted development with ChatGPT, translating prompts into functional code and logic.

-
- Demonstrated strong prompt engineering skills to generate, implement, and refine application workflows.
 - Showcased innovative use of AI for rapid prototyping and development of interactive applications.

PROJECTS Related to Full Stack Development | Fusion Forte Solutions

1. EGSS Accounts Manager | Full Stack Development

- Developed a comprehensive accounting system supporting vouchers, journal entries, purchase/sales invoices, and report generation.
- Built master modules (Accounts, Items, Employees) to manage structured financial and operational data.
- Implemented backend services using C# (Windows Services & REST APIs) with Angular-based frontend for seamless user interaction.

2. Email Campaign Manager | Full Stack Development

- Designed a campaign management platform enabling users to create, schedule, and track email campaigns.
- Implemented features like CSV-based contact uploads, campaign analytics (views, bounces, unsubscribes), and contact management.
- Developed responsive UI using Angular and integrated backend logic for real-time campaign tracking.

3. Contact Manager | Full Stack Development

- Built a responsive contact management system with full CRUD operations (create, view, update, delete).
- Developed REST APIs using Django and integrated with React frontend for dynamic data handling.
- Designed modern UI using Bootstrap grid and card components for enhanced user experience.

4. Grocery Cart Application | Full Stack Development

- Developed a dual-module e-commerce system with Retailer (product management) and Customer (search, cart, order tracking) functionalities.
- Implemented features for product uploads, cart management, and order status tracking using C#, SQL, and jQuery.

-
- Built responsive UI with Bootstrap and ensured smooth interaction between frontend and backend systems.
